

Grading heuristics

- **Submitting the response on time.**
- **Responding to every component of the question asked.**
- **Keeping to the stipulated parameters (for example, number of examples, word count).**
- **Focused and substantive content (no irrelevant meandering).**
- **Clear language. (It is the student's responsibility to make themselves understood!)**
- **Familiarity with, and proper use of, the analytical terms introduced in the lectures and readings. (This is the most important criterion!)**
